

REPEATER/FREQUENCY COORDINATION POLICY OF WISCONSIN REPEATER ALLIANCE, INC.

A Wisconsin Nonstock Corporation

Statewide Amateur Radio Repeater and Auxiliary-Station Frequency Coordination,
Interference Management, Continuity, and Technical Administration

Document Type	Board-Adoptable Operational and Technical Governance Policy
Policy Owner	Board of Directors
Primary Administrator	Board-appointed Frequency Coordinator
Adoption Date	_____
Effective Date	_____
Version	1.0 - WRA Modernized Edition
Supersedes	Wisconsin Association of Repeaters, Inc. Policy dated August 15, 2020, upon formal WRA adoption
Board Resolution / Minutes Reference	_____

TECHNICAL PRESERVATION NOTICE. *This modernization changes corporate identity, governance references, administrative controls, and review procedures where necessary for Wisconsin Repeater Alliance, Inc. It does not alter the substantive frequency allocations, repeater pairs, channel spacing, splits, selective-access assignments, or other technical parameters contained in the separately adopted Wisconsin Band Plan or Selective Access Guideline. The legacy numerical and procedural thresholds expressly carried forward in this Policy are preserved unless a future authorized technical process changes them.*

 ARTICLE XIV - Relationship to the Wisconsin Band Plan and Selective Access Guideline
 ARTICLE XV - Amendments, Change Control, and Technical Preservation
 ARTICLE XVI - Transition from Legacy WAR Policy and Operational Continuity
 ARTICLE XVII - Adoption and Certification
 APPENDIX A - Legacy Technical and Procedural Continuity Record
 APPENDIX B - Federal Regulatory Reference Note

REVISION HISTORY

Date / Version	Revision
2009	Base document upon which all subsequent changes were proposed and/or adopted.
July 2016	Rewritten to better conform with then-current adopted standards and practices.
September 2016	Updated definitions; included coordination parameters, de-coordination parameters, frequency interference, and arbitration.
October 2016	Updated frequency coordination definitions and de-coordination parameters.
November 2016	Released to membership for comment.
March 2017	Adopted as amended by the membership.
August 2020	Changed Periodic Updates to bi-annual / two-calendar-year updates.
WRA Version 1.0	Modernized for Wisconsin Repeater Alliance, Inc.; reconciles governance references, Board appointment authority, impartial internal review, records, forms, and organizational continuity while preserving the legacy technical thresholds and the separate

	Wisconsin Band Plan technical content.
--	--

ARTICLE I - PURPOSE, AUTHORITY, SCOPE, AND GOVERNING PRIORITY

1.1 Purpose

Wisconsin Repeater Alliance, Inc. (the “Corporation” or “WRA”) maintains this Repeater/Frequency Coordination Policy to provide a fair, documented, technically responsible, and sustainable framework for statewide frequency coordination recommendations and related technical assistance for non-commercial amateur radio repeater, auxiliary, and associated station systems in Wisconsin. The Policy preserves the useful technical and procedural content of the legacy Wisconsin Association of Repeaters, Inc. (“WAR”) policy while modernizing the governance and administrative structure for WRA.

1.2 Frequency Coordinator Function

For purposes of this Policy, WRA uses the Federal Communications Commission definition of a “frequency coordinator” in 47 C.F.R. § 97.3(a)(22): an entity recognized in a local or regional area by eligible amateur operators that recommends transmit/receive channels and associated operating and technical parameters for auxiliary or repeater stations in order to avoid or minimize potential interference. WRA’s coordination function is therefore advisory and technical in nature; it is not an FCC license-granting function and does not confer ownership of amateur spectrum.

1.3 Scope

This Policy governs the administration of frequency coordination recommendations, construction and implementation periods, periodic updates, significant changes, administrative transfers, interference handling, internal technical review, and de-coordination. Detailed frequency allocations, repeater pairs, spacing, splits, band segments, and other band-specific technical parameters remain governed by the separately adopted Wisconsin Band Plan. Detailed regional selective-access assignments remain governed by the separately adopted Selective Access Guideline.

1.4 Coordination Principles

- Coordination requests shall be handled in the order received on a first-come, first-served basis, without bias.
- WRA shall maintain an institutional database or other controlled record of coordinated systems and related recommendations.
- Coordinated system owners, Holders of Coordination, and Primary Contacts shall provide the periodic updates required by this Policy.
- Coordination recommendations shall be based on applicable FCC Part 97 requirements, WRA policy, established software modeling techniques, and the adopted Wisconsin Band Plan.

- No coordination recommendation conveys exclusive or indefinite use of the frequencies described in the recommendation.

1.5 Governing Priority

This Policy is subordinate to the Corporation's filed Articles of Incorporation, applicable law, and the Bylaws. Board resolutions and other policies apply within their lawful scope. If a conflict concerns a frequency-specific technical allocation or parameter, the adopted Wisconsin Band Plan or other controlling technical instrument governs the technical detail. If a conflict concerns internal appeal procedure, the Corporation's Appeals and Dispute Resolution Policy governs the appeal process. No administrative form or instruction may override this Policy or a higher governing authority.

1.6 Amendments and Interpretation

Changes to this Policy shall be approved through the authority and procedure established by the Bylaws and duly authorized Board action. Interpretation of this Policy by the Frequency Coordinator is subject to the impartial internal review process described in Article X. A technical disagreement or appeal shall be resolved from the adopted record and applicable standards, not by personal status, club affiliation, donor status, historical influence, or other favoritism.

ARTICLE II - GOVERNANCE AND ADMINISTRATION OF FREQUENCY COORDINATION

2.1 Board Oversight

The Board of Directors established under the WRA Bylaws retains ultimate governance oversight of the frequency coordination program, including appointment and removal of the Frequency Coordinator, adoption of governing policies, approval of material administrative changes, protection of organizational records and assets, succession planning, and accountability. Board oversight does not authorize individual directors or officers to direct a predetermined technical outcome in a particular coordination matter.

2.2 Appointment of the Frequency Coordinator

The Frequency Coordinator shall be appointed by the Board of Directors in accordance with the Bylaws and applicable Board policy. This provision replaces the legacy policy reference to appointment by an "Executive Committee" and reconciles the appointment authority with the governance structure directed for Wisconsin Repeater Alliance, Inc. The Board may appoint one or more deputy, assistant, or acting coordinators when reasonably necessary for continuity, subject to documented authority and supervision.

2.3 Technical Responsibility

The Frequency Coordinator is responsible for administering coordination recommendations under the adopted Band Plan, this Policy, applicable technical standards, and the Corporation's forms and procedures. The Coordinator shall apply the same standards to similarly situated applicants and shall document material technical judgments sufficiently to permit continuity, internal review, and later institutional understanding.

2.4 Delegation and Committees

The Board may establish a Frequency Coordination Committee, Technical and Band Plan Advisory Committee, working group, or other qualified technical body to support the Frequency Coordinator. Unless the Bylaws or a Board resolution expressly provides otherwise, such bodies are advisory or operational and do not independently exercise the legal authority of the Board. Delegation shall not eliminate the Coordinator's responsibility for decisions assigned to that role or the Board's governance responsibility for the program.

2.5 Conflicts and Impartiality

A director, officer, Frequency Coordinator, technical advisor, committee member, or reviewer with a material personal, financial, club, system-owner, competitive, or other conflict concerning a particular matter shall disclose the conflict and comply with the Corporation's Conflict of Interest Policy. A person who made, materially advised, or has a material conflict concerning a challenged technical decision shall not vote as the impartial decision-maker on the appeal of that decision.

2.6 Continuity and Succession

Coordination records, modeling files, forms, credentials, correspondence, and technical knowledge are institutional resources. The Board and Frequency Coordinator shall maintain reasonable succession and handover procedures so that statewide coordination does not depend on one individual. Departure, incapacity, resignation, or removal of a coordinator does not invalidate existing coordination recommendations solely by reason of the personnel change.

ARTICLE III - DEFINITIONS

Active Repeater and/or Auxiliary Station. An active repeater and/or auxiliary station must satisfy all of the following characteristics: (1) it is available for use by the general amateur public, or in the case of a closed system by club members only, on its coordinated frequencies for at least 305 days per year, except during the first year of operation; (2) its Primary Contact or Holder of Coordination responds to periodic updates; and (3) it operates consistently with the coordination recommendation.

Closed Repeater. A system that does not allow public access.

Coordination Recommendation. WRA's written recommendation concerning transmit/receive channels and associated operating or technical parameters for a station or system. A recommendation is not an FCC license, a property interest, or an exclusive or indefinite assignment of spectrum.

Frequency Coordinator. The Board-appointed person or authorized function responsible for administering WRA frequency coordination in Wisconsin under the Bylaws, this Policy, the Wisconsin Band Plan, applicable technical standards, and Board-approved procedures.

Holder of Coordination. The individual or entity responsible for ensuring that station operation remains consistent with the coordination recommendation.

In-Active Repeater and/or Auxiliary Station. A repeater and/or auxiliary station that does not meet the definition of an Active Repeater and/or Auxiliary Station.

Interference. For purposes of the legacy WRA administrative framework, an undesired signal that causes distortion or blocking of a desired signal. Merely hearing other on-channel users as a nuisance is not, by itself, interference under this Policy. Abnormal short-term propagation is also not considered interference for purposes of the complaint process. Applicable FCC definitions and rules remain controlling as a matter of federal law.

Open Repeater. A system whose use by transient operators is welcomed and encouraged.

Periodic Update. A required update for maintaining a coordination recommendation. The update period is two calendar years. WRA shall send the coordination document and periodic-update communication to the Primary Contact or other authorized contact of record.

Primary Contact. The person and contact information through which WRA ordinarily corresponds concerning the coordination.

Selective Access. A tone, code, or other method used to control access to a system receiver.

Significant Change. Any change in station location, selective access, emission designator or mode of operation, antenna height, effective radiated power (ERP), or any other parameter affecting the system service area.

Sponsor. The individual or entity sponsoring the station and the associated contact information.

System. As context requires, a coordinated repeater and/or auxiliary-station installation and its associated transmitters, receivers, links, remote receivers, control receivers, remote bases, or other components reflected in the coordination record.

Technical Appeal. An internal request for review of a final coordination, modification, interference, transfer, or de-coordination determination under Article X and the separate Appeals and Dispute Resolution Policy. It is not an FCC proceeding and is not contractual arbitration of civil legal claims.

ARTICLE IV - FREQUENCY COORDINATION REQUIREMENTS AND RECOMMENDATION GUIDELINES

4.1 Coordination Application

Application for a frequency coordination recommendation shall be made through the Corporation's approved Coordination Form or successor station-coordination forms and instructions. The applicant must provide the information required to complete the applicable form. WRA may request clarification or missing technical information reasonably necessary to evaluate the request.

4.2 Processing Order

Coordination requests shall be handled and processed in the order received on a first-come, first-served basis. For administrative integrity, WRA should record the received date and, where material, the time or sequence of receipt. An incomplete submission may be held pending

required information, consistent with published procedures, without allowing informal favoritism to displace an earlier complete request.

4.3 Technical Basis of Recommendations

1. Coordination recommendations must comply with applicable FCC Part 97 rules and regulations and with WRA policies.
2. Coordination recommendations shall be based on established software modeling techniques.
3. Coordination recommendations shall be based on the Corporation's adopted Wisconsin Band Plan.
4. Where a technical matter affects a neighboring state or coordination region, the Frequency Coordinator may collaborate with the appropriate neighboring frequency coordinator while preserving WRA's records and Wisconsin responsibilities.

4.4 Construction as Recommended and Notice of Service

1. Once a frequency recommendation is issued, the system must be constructed and operated as recommended unless WRA approves a modification through the applicable process.
2. Once the system is placed into service, the Frequency Coordinator must be notified so that the coordination record can reflect operational status.

4.5 No Exclusive or Indefinite Spectrum Right

All Part 97 licensees have an equal right to make lawful use of amateur spectrum subject to FCC rules. A WRA coordination recommendation does not convey exclusive or indefinite use of the frequencies described in the recommendation. This principle is consistent with 47 C.F.R. § 97.101(b), which requires cooperation in channel selection and provides that no frequency is assigned for the exclusive use of any station.

4.6 Revision of a Recommendation

A coordination recommendation may be revised when reasonably required to resolve an interference problem, improve spectrum utilization, or implement a duly adopted policy change. A revision shall be documented and shall not be used to bypass the authorized process for a substantive change to the Wisconsin Band Plan.

ARTICLE V - TIME LIMIT FOR CONSTRUCTION OF NEW SYSTEMS

5.1 Initial Construction Period

A new system must be placed into operation within six (6) months after the coordination recommendation is issued.

5.2 Extension

The Holder of Coordination and/or Primary Contact may request an extended implementation period of up to six (6) additional consecutive months. The request should be submitted to the Frequency Coordinator before expiration of the initial period and must include substantive justification for the delay.

5.3 Abandonment and Withdrawal

A system that is not operational at the end of the initial six-month period or an approved extension period is considered abandoned, and the recommendation is withdrawn. Withdrawal under this section does not prevent a later new application, but the later request is subject to then-current availability, standards, and processing order.

ARTICLE VI - EXISTING STATIONS, PERIODIC UPDATES, AND CONTINUATION OF RECOMMENDATIONS

6.1 Periodic Update Requirement

Frequency coordination recommendations for repeater and/or auxiliary stations are subject to periodic update. The update period is two calendar years.

6.2 Ninety-Day Response Period

Once a periodic update request is issued, the Holder of Coordination must reply within ninety (90) days. WRA should send the request to the Primary Contact and may use other authorized contact information in the coordination record to promote reliable notice.

6.3 Content of Update

The update should confirm whether the system remains active, whether the recorded Holder of Coordination, Sponsor, Primary Contact, station location, selective access, emission/mode, antenna height, ERP, and other service-area parameters remain accurate, and whether any material fact requires a separate modification or transfer procedure. The technical requirements of the applicable forms and adopted standards control the required data.

6.4 Failure to Respond

Failure of the Holder of Coordination to respond within ninety (90) days is a ground for de-coordination under Article XI. Any notice, cure, or appeal procedure applicable to the final administrative action shall be followed before the record is closed, except where controlling law or an FCC order requires a different result.

ARTICLE VII - SIGNIFICANT CHANGES AND EXTENDED MAINTENANCE

7.1 Significant Change

A significant change includes a change in station location, selective access, emission designator or mode of operation, antenna height, ERP, or any other parameter affecting the system service area. A significant change may invalidate the existing coordination recommendation and shall be handled through the applicable modification or new-coordination process rather than as a mere contact-information update.

7.2 Technical Changes During Holder Transfer

The New Holder of Coordination procedure is intended for an administrative transfer where technical characteristics have not changed. If the repeater's antenna, location, height, ERP, or another material technical characteristic is being changed, the applicable Coordination

Application / Station Coordination Proposal process must be used instead of treating the transaction solely as a Holder transfer.

7.3 Extended Maintenance

If a repeater or auxiliary station is removed from service for maintenance and is expected to remain off the air for more than sixty (60) consecutive days, the Holder of Coordination must notify the Frequency Coordinator. The notice should identify the system, the anticipated period of maintenance, and updated contact information if relevant. Extended maintenance does not automatically terminate the coordination when timely notice is provided, but prolonged non-operation remains subject to the Active/In-Active definitions and periodic-update process.

ARTICLE VIII - TRANSFER OF COORDINATION

8.1 Administrative Transfer

To make an administrative transfer of an existing coordination, the current Holder of Coordination must first relinquish the coordination and identify or authorize the proposed new Holder of Coordination through the Corporation's approved Relinquish Coordination process.

8.2 New Holder Information

The proposed new Holder of Coordination must provide all required administrative information through the Corporation's approved New Holder of Coordination form or successor process, including any required Sponsor, Primary Contact, callsign, station, and associated-system information.

8.3 Validity of Transfer

A transfer is not complete merely because the proposed new Holder submits a form. The current Holder's required relinquishment must be received, the required new-holder information must be complete, and WRA must update the coordination record. If technical characteristics have changed, Article VII applies and the matter must be evaluated through the applicable technical modification process.

8.4 Associated Links and Components

Where the transfer is intended to apply to associated links, remote bases, control receivers, or other coordinated components, those components must be identified in the transfer record as required by the applicable form so that WRA can preserve an accurate system record.

ARTICLE IX - FREQUENCY INTERFERENCE AND RESOLUTION PROCEDURES

9.1 Input Frequency Interference Consequences

1. Frequency recommendations shall be made with as much, if not more, weight given to the consequences of transmissions from fixed and mobile stations on the input frequency as compared with the consequences of the output signal of the coordinated station itself.
2. The legacy policy recognizes that many coordination and interference problems arise from individual stations activating repeaters in addition to the repeater intended. Technical

evaluation should therefore consider the effect of input-frequency use as well as output coverage.

9.2 Interference to a Coordinated Repeater or Auxiliary Station

1. If an uncoordinated repeater or auxiliary station causes harmful interference to a coordinated station, primary responsibility for correcting the interference rests with the owner/licensee of the uncoordinated system. This internal policy principle is consistent with the frequency-coordination treatment in 47 C.F.R. §§ 97.201(c) and 97.205(c).
2. If both systems are coordinated, WRA's legacy internal policy places primary remedial responsibility on the Holder of Coordination with the most recent coordination recommendation. This internal allocation does not eliminate any responsibility that station licensees have under FCC rules to cooperate in resolving harmful interference.
3. When a Wisconsin system is involved in interference with a system operated outside Wisconsin, the Frequency Coordinator, when called upon, shall work with the frequency coordinator from the other state or region and shall apply the foregoing principles in a cooperative manner.

9.3 Documentation by the Affected System

Repeater and/or auxiliary-system owners receiving harmful interference from another system or its users should document the times, conditions, call signs, and type of interference. Documentation should be sufficiently specific to allow the other system owner and the Frequency Coordinator to understand and evaluate the issue.

9.4 Band Conditions

Band conditions should be observed in all cases. Abnormal short-term propagation shall not be treated as the basis for an interference complaint under this Policy. A complainant should distinguish persistent or recurring harmful interference from unusual propagation or mere on-channel nuisance.

9.5 Direct Resolution First

The Holder of Coordination of the system receiving interference should contact the Holder of Coordination of the interfering system, outline the problem, provide available documentation, and make a reasonable effort to solve the issue directly.

9.6 Referral to the Frequency Coordinator

If the problem cannot be resolved with the owner or Holder of Coordination of the interfering system, the Holder of Coordination of the station being interfered with should contact the Frequency Coordinator, outline the problem, and provide the available documentation. The referral should explain the attempts already made to contact the interfering system owner and/or user and the results of those attempts.

ARTICLE X - INTERNAL TECHNICAL REVIEW AND APPEALS

10.1 Coordinator Review Record

When the Frequency Coordinator is asked to resolve an interference dispute, the documented history of both systems, coordination status, relevant dates and times, and other pertinent information shall be requested from the Holders of Coordination as reasonably necessary. The Coordinator should issue or preserve a written record of any final technical determination that materially affects a coordination recommendation.

10.2 Escalation When Cooperation Fails

If the Frequency Coordinator cannot resolve the complaint and the operator or Holder bearing responsibility will not cooperate, will not take reasonable steps to address the problem, or refuses to cooperate with the Frequency Coordinator in a reasonable manner, the matter may be referred for internal technical review under the Corporation's Appeals and Dispute Resolution Policy.

10.3 Impartial Review

The legacy chair-appointed review-board model is replaced for WRA by an impartial review process. The reviewing body shall be constituted in the manner required by the Bylaws, Committee Charters, and Appeals and Dispute Resolution Policy and should include at least three qualified, disinterested persons where that policy so provides. The original decision-maker, a material advisor to the challenged decision, and a person with a material conflict shall not vote as an appellate decision-maker.

10.4 Nature of Review

The review body shall act promptly, review the documented record, identify the applicable technical and procedural standards, and issue a reasoned determination or recommendation concerning actions reasonably necessary to resolve the interference or correct the challenged administrative decision. The term "arbitration" used in the legacy WAR policy is treated in WRA documents as internal technical review; it does not create contractual arbitration of civil claims or an FCC adjudicatory process.

10.5 Notice Following Upheld De-Coordination

If the internal review upholds a decision that results in revocation or de-coordination, the Frequency Coordinator shall, within ten (10) days after the final internal determination, provide the responsible Holder of Coordination written notice by certified mail. WRA may also provide a duplicate electronic notice when an address is available. The record shall preserve evidence of the notice and delivery status.

10.6 FCC Referral

After confirmation of delivery of a final de-coordination notice in an unresolved interference matter, the Frequency Coordinator may refer the documented matter to the FCC when referral is appropriate. WRA shall not represent its internal decision as an FCC order, and nothing in this Policy limits the FCC's independent authority or a station licensee's obligations under federal law.

ARTICLE XI - FREQUENCY DE-COORDINATION

11.1 Grounds for De-Coordination

A coordination recommendation may be de-coordinated, revoked, or withdrawn under the following conditions, preserving the substantive grounds contained in the legacy policy:

1. The coordination recommendation is invalidated due to a Significant Change.
2. The repeater or auxiliary station is removed from service permanently.
3. The system is ordered permanently shut down by the FCC for any reason.
4. The system has been found to be In-Active under this Policy.
5. The Holder of Coordination fails to reply to a periodic update within ninety (90) days.
6. The system is found to bear primary responsibility in a case of interference under the applicable standards and review process.
7. The Holder of Coordination exhibits lack of candor regarding a periodic update, including reporting that a system is active when submitted observations establish that it is not.

11.2 Notice and Record

Except where an FCC order or other controlling requirement requires immediate action, WRA should provide written notice of the basis for proposed de-coordination and identify any available opportunity to correct an administrative deficiency, submit responsive information, or seek internal review. The final coordination record shall state the effective status and the reason for de-coordination.

11.3 Effect of De-Coordination

De-coordination ends WRA's recommendation status for the affected system or parameter as stated in the final notice. It does not cancel an FCC amateur license, transfer ownership of equipment, adjudicate private property rights, or itself impose an FCC sanction. Any subsequent request for coordination shall be evaluated under the rules, Band Plan, forms, and availability applicable at the time of the new request.

ARTICLE XII - COORDINATION RECORDS, NOTICES, AND DATA STEWARDSHIP

12.1 Coordination Database and File

WRA shall maintain a controlled database or other institutional record of coordinated systems. The record should contain, as applicable, the current coordination recommendation, contact information, station technical data, significant modifications, construction/service status, periodic updates, transfer records, interference correspondence, review decisions, de-coordination records, and other material documentation necessary to administer the coordination program.

12.2 Institutional Ownership and Custody

Coordination records held or created by WRA in the course of its operations are institutional records subject to the Corporation's records, privacy, cybersecurity, asset-management, and retention policies. Access credentials, databases, technical repositories, and historical files shall

not be treated as the personal property of an officer, director, coordinator, volunteer, club, or system owner merely because that person stores or administers them.

12.3 Primary Contact and Notice

The Primary Contact is the ordinary correspondence point for coordination communications. Each Holder of Coordination is responsible for keeping contact information reasonably current. WRA should preserve evidence of material notices, including periodic update requests, significant technical determinations, transfer confirmations, and de-coordination notices.

12.4 Privacy and Appropriate Disclosure

WRA may publish or disclose coordination information appropriate to its public technical mission while protecting personal contact information, credentials, security-sensitive information, and other nonpublic data in accordance with applicable law and the Corporation's Records Access and Inspection Policy and Data Privacy and Cybersecurity Policy. Transparency shall not be used to expose passwords or unrelated private data, and confidentiality shall not be used to conceal a technical decision or defeat a valid appeal.

ARTICLE XIII - FORMS, INSTRUCTIONS, AND ADMINISTRATIVE INSTRUMENTS

13.1 Approved Forms

WRA may use and modernize the legacy Station Coordination Proposal "C" Contact Information form and "S" Station Coordination form, the related instructions, the New Holder of Coordination form, the Relinquish Coordination form or successor process, and other Board-approved administrative instruments. Corporate name, branding, addresses, websites, email contacts, and governance references may be updated without altering technical requirements unless the appropriate technical authority separately approves a substantive change.

13.2 Station-Coordination Terminology

The legacy instructions explain that coordination may concern more than a conventional repeater and may include a repeater, auxiliary repeater or remote receive site, auxiliary link receiver, control receiver, point-to-point link, remote base, or related station component. WRA may therefore use "station coordination" as an operational term while retaining "repeater/frequency coordination" as the broader program and policy description.

13.3 Membership Separate from Coordination

Membership administration shall be handled under the WRA Bylaws and Membership Policy and shall not be embedded in the technical coordination application process. A person's technical coordination status and organizational membership status are separate unless the Bylaws expressly provide a lawful connection for a specific governance purpose.

13.4 Technical Inconsistencies in Legacy Instructions

If a legacy form or instruction contains an apparent internal technical inconsistency, clerical error, or ambiguous engineering statement, WRA shall flag the matter for competent technical

review rather than silently changing a substantive technical value. Editorial corrections that do not affect technical substance may be made through documented version control.

ARTICLE XIV - RELATIONSHIP TO THE WISCONSIN BAND PLAN AND SELECTIVE ACCESS GUIDELINE

14.1 Wisconsin Band Plan

The Wisconsin Band Plan is a separate technical instrument. Its frequencies, repeater pairs, band segments, channel spacing, splits, mode allocations, grandfathering provisions, and other substantive technical parameters are not changed by this Policy. Coordination recommendations under this Policy shall use the currently adopted Band Plan.

14.2 Selective Access Guideline

The Selective Access Guideline remains the controlling technical source for the detailed regional tone/code plan and associated technical assignments to the extent adopted by WRA. This Policy does not restate or alter those detailed assignments.

14.3 Editorial Modernization

WRA may update legacy organization names, governance references, document formatting, grammar, typography, website references, contact methods, and other non-substantive presentation features in the Band Plan and Selective Access materials. Any proposed substantive technical change must be identified as such and handled through the separately authorized technical review and approval process.

ARTICLE XV - AMENDMENTS, CHANGE CONTROL, AND TECHNICAL PRESERVATION

15.1 Policy Amendments

This Policy may be amended only through the approval authority required by the Bylaws and duly authorized corporate action. The amendment record should identify the date, approving authority, and nature of the change.

15.2 Separation of Governance and Technical Changes

A governance or administrative amendment to this Policy shall not be treated as authority to change a frequency allocation, repeater pair, channel spacing, split, selective-access assignment, or other substantive Band Plan parameter. Conversely, an authorized Band Plan amendment shall not silently amend the Board structure, officer authority, appeal process, or other corporate governance rule.

15.3 Version Control

The Secretary, Frequency Coordinator, or another Board-designated custodian shall maintain the authoritative adopted copy of this Policy and its revision history. Published copies should identify the current version or effective date so that applicants and stakeholders can determine which procedure governs.

ARTICLE XVI - TRANSITION FROM LEGACY WAR POLICY AND OPERATIONAL CONTINUITY

16.1 Supersession

Upon formal adoption and effective date, this Policy supersedes the legacy Wisconsin Association of Repeaters, Inc. policy dated August 15, 2020 for WRA operations. The legacy policy remains an historical source record and should be retained as part of the institutional archive.

16.2 Continuity of Technical Records

WRA's objective is to preserve useful coordination history, technical records, institutional knowledge, stakeholder relationships, and Band Plan continuity. Existing legacy coordination records may be used as historical and technical source material to the extent they are lawfully obtained and their provenance and status are reasonably documented.

16.3 No Automatic Legal Succession

Continuation of a similar mission does not, by itself, make WRA the legal successor to Wisconsin Association of Repeaters, Inc. or transfer title to legacy databases, domains, records, intellectual property, contracts, funds, equipment, liabilities, or other assets. Any material legacy transfer must have a lawful and documented basis and must be accepted or administered through the Corporation's authorized transition and asset-management process.

16.4 Existing Recommendations During Transition

The organizational transition is intended to avoid unnecessary disruption to legitimate coordination expectations. WRA should preserve and administer existing coordination history where legally and practically available, subject to verification of the record, periodic updates, this Policy, the adopted Band Plan, and any later lawful modification, transfer, appeal, or de-coordination action. This continuity principle does not create spectrum ownership or prevent correction of inaccurate or unsupported legacy records.

ARTICLE XVII - ADOPTION AND CERTIFICATION

17.1 Adoption

This Repeater/Frequency Coordination Policy becomes effective upon adoption by the Board of Directors or on the later effective date stated in the adopting resolution. The Board directs the officers, Frequency Coordinator, committees, volunteers, and administrators acting within this program to implement the Policy consistently with the Articles of Incorporation, Bylaws, applicable law, and the other Board-approved governance and technical instruments.

17.2 Certification

The undersigned certify that the foregoing Repeater/Frequency Coordination Policy was duly adopted by authorized corporate action of Wisconsin Repeater Alliance, Inc. and remains in effect until amended, superseded, or repealed in accordance with the governing documents.

Adoption Date	_____
Effective Date	_____
Board Resolution / Minutes Reference	_____
Chair/President	_____
Secretary / Authorized Certifier	_____

APPENDIX A - LEGACY TECHNICAL AND PROCEDURAL CONTINUITY RECORD

This Appendix identifies the substantive thresholds and operating principles expressly carried forward from the legacy WAR Policy dated August 15, 2020. It is included to make the modernization auditable and to reduce the risk that an existing technical or procedural point is lost through reformatting.

Legacy Point	Preserved Requirement / Principle
Active-status availability	At least 305 days per year on coordinated frequencies, except the first year of operation; closed systems may satisfy availability through club-member use.
Periodic update interval	Two calendar years.
Periodic update response	Holder of Coordination must reply within 90 days after an update request is issued.
New-system construction	System must be operational within 6 months after recommendation issuance.
Construction extension	Up to 6 additional consecutive months, upon request with substantive justification.
Abandonment	Not operational by the end of the applicable construction/extension period -> recommendation withdrawn as abandoned.
Extended maintenance notice	Holder must notify the Frequency Coordinator if the system is expected to be off

	air for more than 60 consecutive days.
Processing order	First-come, first-served, without bias.
Technical basis	FCC Part 97, WRA policy, established software modeling techniques, and the adopted Wisconsin Band Plan.
No exclusive/indefinite right	Coordination recommendation does not convey exclusive or indefinite use of the frequencies described.
Potential revision	Recommendation may be revised to resolve interference, improve spectrum utilization, or implement a policy change.
Significant change	Station location; selective access; emission designator/mode; antenna height; ERP; or another parameter affecting service area.
Transfer sequence	Current Holder relinquishes first; new Holder provides required administrative information; technical changes require the coordination/modification process.
Input-frequency evaluation	Input-frequency consequences receive as much, if not more, weight as output-signal consequences.
Uncoordinated interference	Owner/licensee of the uncoordinated system has primary responsibility to correct harmful interference to a coordinated station.
Both systems coordinated	Legacy WRA internal policy assigns primary remedial responsibility to the Holder with the most recent coordination recommendation, without displacing FCC responsibilities.
Interference documentation	Times, conditions, call signs, type of interference, and direct-resolution efforts should be documented.
Abnormal propagation	Abnormal short-term band conditions are not treated as the basis for an interference complaint.

Final de-coordination notice after review	If the internal review upholds de-coordination in an unresolved interference matter, certified-mail notice is issued within 10 days after the final internal determination.
De-coordination grounds	Significant change; permanent removal from service; permanent FCC shutdown; inactive status; no response to periodic update within 90 days; primary responsibility in interference; lack of candor in periodic update.

APPENDIX B - FEDERAL REGULATORY REFERENCE NOTE

The following federal provisions were checked against the current Electronic Code of Federal Regulations during preparation of this modernized policy. They are included as a concise reference and do not replace review of the current rule text when a specific technical or regulatory issue arises:

- 47 C.F.R. § 97.3(a)(22) - definition of Frequency Coordinator.
- 47 C.F.R. § 97.3(a)(23) - federal definition of Harmful Interference.
- 47 C.F.R. § 97.101(a)-(b) - good engineering and good amateur practice; cooperation in channel selection; no exclusive assignment of a frequency to an amateur station.
- 47 C.F.R. § 97.201(c) - interference responsibility involving auxiliary stations when one station is coordinated and the other is not.
- 47 C.F.R. § 97.205(c) - interference responsibility involving repeaters when one station is coordinated and the other is not.

Regulatory provisions can change. Before relying on a specific FCC rule for a contested matter, WRA should confirm the then-current eCFR text and, when appropriate, obtain qualified regulatory or legal advice. Internal WRA coordination decisions do not replace FCC authority or station-licensee responsibility.
