

**WISCONSIN BAND PLAN
ADOPTION RESOLUTION
OF
WISCONSIN REPEATER ALLIANCE, INC.
A Wisconsin Nonstock Corporation**

Formal Adoption by Reference, Technical Preservation, Version Control, Governance Reconciliation, and Future Change-Control Framework

Document No.	21
Instrument Type	Board Resolution / Technical Governance Instrument
Adopted Technical Source	WAR-Bandplan-Revised-2019.pdf; internal title: “Wisconsin Band Plan - Revised 12/2018”
Technical Effect	Adoption without substantive technical alteration
Adoption Date	_____
Effective Date	_____
Board Resolution / Minutes Reference	_____

This Resolution adopts the identified Wisconsin Band Plan as a controlled technical instrument of the Corporation. It does not itself reproduce, rewrite, or amend the technical tables, frequencies, repeater pairs, channel spacing, splits, allocations, or selective-access assignments contained in the adopted source.

RESOLUTION STATEMENT

Wisconsin Repeater Alliance, Inc. (the “Corporation” or “WRA”) is organized to carry forward and modernize statewide amateur radio repeater and auxiliary-station frequency coordination, technical assistance, interference avoidance, education, spectrum stewardship, records preservation, and related public-benefit activities. The Corporation requires an authoritative technical Band Plan so that coordination decisions can be administered consistently, historical technical expectations can be preserved during organizational transition, and future changes can be distinguished from mere editorial modernization.

The legacy technical source identified in this Resolution is the PDF file named “WAR-Bandplan-Revised-2019.pdf,” which bears the internal heading “Wisconsin Band Plan - Revised 12/2018.” The source is a twenty-page technical document covering statewide band-planning and coordination

material. The Corporation's prior Initial Organizational Board Resolutions treated this source as an interim operating/reference material and expressly preserved its technical content. This Resolution converts that interim treatment into a formal, controlled WRA adoption by reference while maintaining the same technical-preservation limitation.

The purpose of this Resolution is legal and governance clarity, not technical revision. The source Band Plan remains the substantive technical instrument. This Resolution identifies the exact source artifact, defines its status within WRA's governance hierarchy, clarifies that legacy governance names and organizational references do not override WRA's current Bylaws and policies, protects the source against unauthorized alteration, establishes version-control and publication rules, and creates a documented process for any future proposal that would actually change technical substance.

IMPORTANT ADOPTION LIMITS

No Technical Rewrite	This Resolution does not alter any frequency, repeater pair, input/output relationship, spacing, split, band segment, mode allocation, channel designation, technical table, grandfathering rule, or other substantive technical parameter in the adopted source.
Source Controls Technical Substance	Where this Resolution summarizes the source, the source PDF controls the technical detail. No summary in this Resolution replaces a frequency table or technical provision in the source.
Governance References Modernized Separately	Legacy references to Wisconsin Association of Repeaters, Inc., its officers, committees, governance structure, or website are not adopted as WRA governance rules. WRA governance is controlled by WRA's Articles, Bylaws, Board resolutions, and policies.
No Spectrum Ownership	Adoption of a Band Plan or issuance of a coordination recommendation does not create ownership or exclusive assignment of an amateur frequency.
FCC Rules Control	The Band Plan is administered subject to applicable FCC rules. If a provision is later determined to conflict with controlling law, the affected provision is handled through documented legal/technical review rather than silent unilateral editing.

No IP Ownership Assumed	Adoption by reference does not, by itself, represent that WRA owns copyright or other intellectual-property rights in the source file. WRA shall preserve the lawful basis for continued use, publication, adaptation, or rebranding.
Future Substantive Change Requires Separate Process	Any future technical change must be expressly identified as substantive and processed through competent technical review, documented rationale, appropriate stakeholder input, conflicts controls, and Board approval through the authorized process.

- APPENDIX G - Legal and Technical Reference Note

RECITALS

A. The Corporation is a Wisconsin nonstock corporation governed by a Board of Directors under its filed organizational documents, Bylaws, and applicable Wisconsin law.

B. The Corporation's mission includes statewide amateur radio repeater and auxiliary-station frequency coordination, technical assistance, interference avoidance, efficient spectrum use, records preservation, education, and related charitable, educational, and scientific purposes.

C. A frequency coordinator under 47 C.F.R. § 97.3(a)(22) is an entity recognized in a local or regional area that recommends transmit/receive channels and associated operating and technical parameters for eligible auxiliary or repeater stations in order to avoid or minimize potential interference.

D. The legacy Wisconsin Association of Repeaters, Inc. historically maintained a Wisconsin Band Plan used as a technical basis for frequency-coordination recommendations. The source file supplied for this project is named "WAR-Bandplan-Revised-2019.pdf" and internally identifies itself as "Wisconsin Band Plan - Revised 12/2018."

E. The source Band Plan explains that coordinated sub-bands and technical channel information are used to support repeater and auxiliary-link coordination while also considering adjacent states, weak-signal modes, digital communications, simplex activity, satellite use, and other amateur-service interests.

F. The Corporation's Initial Organizational Board Resolutions already authorized interim use of the source Band Plan and expressly provided that no frequency allocation, repeater pair, channel spacing, frequency split, technical table, or other substantive technical parameter would be changed through organizational modernization.

G. The Corporation's Technical and Band Plan Advisory Committee Charter likewise requires preservation of existing technical Band Plan substance during the current modernization effort and separates editorial changes from substantive technical changes.

H. The Corporation intends to publish and administer a clear WRA-controlled technical instrument without inaccurately representing that organizational rebranding itself creates technical changes or intellectual-property ownership.

I. The Board recognizes that technical continuity is especially important during transition from a legacy organization because pending and existing coordination records, neighboring-state relationships, historical technical decisions, and stakeholder expectations should not be disrupted merely by a change in corporate governance or organizational name.

J. The Board further recognizes that future technical changes may eventually be appropriate as technology, congestion, modes, interference conditions, regional coordination, or applicable law develops, but any such change should be deliberate, technically supported, conflict-controlled, recorded, and distinguishable from editorial cleanup.

K. 47 C.F.R. § 97.101 requires good engineering and good amateur practice and cooperative use of amateur-service frequencies and provides that no frequency is assigned for the exclusive use of any station; WRA's Band Plan therefore functions as a technical coordination instrument and not as an FCC license or grant of spectrum ownership.

L. The Board finds that formal adoption by reference, exact source identification, preservation controls, and a future change-control process are in the best interests of the Corporation and the amateur-radio community it serves.

NOW, THEREFORE, BE IT RESOLVED by the Board of Directors of Wisconsin Repeater Alliance, Inc. as follows:

RESOLUTION 1 - CORPORATE AUTHORITY AND PURPOSE

1.1 Board Action

The Board hereby exercises its corporate oversight authority to establish the technical governance instrument used by the Corporation for statewide amateur radio frequency coordination. Adoption of the Band Plan is a Board governance action establishing the technical reference under which delegated coordination functions are administered; it is not an individual act of the Frequency Coordinator, a volunteer, a legacy officeholder, or a technical committee.

1.2 Purpose

The purposes of this adoption are to preserve technical continuity, identify an authoritative source, ensure consistent administration, maintain reliable records, separate technical rules from outdated legacy governance references, and create an orderly process for any future technical amendment.

1.3 Board Oversight Without Predetermined Outcomes

The Board retains governance responsibility for the Band Plan framework, resources, records, change-control process, conflicts safeguards, and publication. The Board shall not use that oversight to direct a predetermined coordination outcome for a particular applicant, club, system owner, donor, vendor, director, officer, or other interested person contrary to the adopted technical standards and fair process.

RESOLUTION 2 - IDENTIFICATION OF THE ADOPTED SOURCE ARTIFACT

2.1 Source File

The technical source adopted by this Resolution is the PDF file named "WAR-Bandplan-Revised-2019.pdf," bearing the internal heading "Wisconsin Band Plan - Revised 12/2018."

2.2 Source Integrity Identifier

For source-control purposes, the supplied source file consists of twenty pages, has a file size of 435,639 bytes, and has SHA-256

digest a6d54a34a07cf341019ec2da55e4b3f696dfe981a190ffaecce5494e3a2a8151. These identifiers are recorded to reduce ambiguity concerning which historical file the Board intended to adopt. Appendix A contains the formal source-artifact certificate.

2.3 Technical Source Controls Over Summaries

No list, table, summary, appendix, Board minute, website description, or explanatory sentence in this Resolution replaces the technical text and tables of the identified source. Where a discrepancy exists between a summary and the source's technical content, the source controls unless and until a later substantive amendment is validly adopted.

2.4 Preservation of Source Copy

The Secretary or designated records custodian shall preserve an unaltered archival copy of the adopted source in the Corporation's official records. The technical custodian shall preserve a separate controlled working/publication copy so that ordinary publication activity does not alter the archival source.

RESOLUTION 3 - FORMAL ADOPTION BY REFERENCE

3.1 Adoption

Subject to the limitations in this Resolution and to a lawful basis for WRA's continued use of the source material, the Board formally adopts by reference the technical content of the identified Wisconsin Band Plan as the Corporation's authoritative Band Plan for coordination administration as of the Effective Date.

3.2 Adoption by Reference

The full technical source is incorporated into this Board action by reference rather than reproduced in this Resolution. The Corporation shall maintain the exact source file together with this Resolution in its technical and governance records so that the adopted technical provisions can be authenticated without relying on later website formatting.

3.3 No Adoption of Legacy Corporate Governance

Adoption by reference is limited to the technical Band Plan function. It does not adopt the legacy corporation's bylaws, Board structure, officer authority, committee structure, membership rules, appeals appointments, financial rules, corporate identity, contractual obligations, debts, claims, or legal status.

3.4 Companion Policies

The Band Plan shall be administered together with WRA's Bylaws, Frequency Coordination Standards and Repeater/Frequency Coordination Policy when adopted, Selective Access Guideline, approved application forms and instructions, Appeals and Dispute Resolution Policy, Data Privacy and Cybersecurity Policy, records policies, and other duly adopted technical governance instruments.

RESOLUTION 4 - PRESERVATION OF TECHNICAL CONTENT

4.1 Technical Freeze for Modernization

The current modernization project shall not change the Band Plan's frequencies, repeater pairs, input/output relationships, spacing, frequency splits, band segments, channel assignments, coordinated/non-coordinated technical designations, selective-access assignments, technical tables, spectral-purity provisions, or other substantive technical parameters merely to update branding, formatting, governance references, or grammar.

4.2 No Implied Change

No technical change may be inferred from a changed logo, organization name, page layout, typography, heading style, hyperlink, table style, footer, contact address, website address, or replacement of a legacy governance title with a WRA governance reference.

4.3 No Silent Correction of Technical Data

A suspected technical typo, inconsistent frequency, pair, spacing statement, mode designation, table entry, or other technical discrepancy shall not be silently "corrected" during editorial modernization. The issue shall be documented and classified under Resolution 12. If correction would affect technical meaning or an engineering outcome, it is substantive unless a qualified review establishes that the correction merely restores the clearly intended existing technical meaning without changing the actual rule.

4.4 Technical Preservation Checklist

Every modernization release shall be checked against Appendix B or an equivalent verification record. The reviewer shall confirm that substantive technical fields remain unchanged or identify each approved substantive amendment by separate Board reference.

RESOLUTION 5 - STATUS WITHIN THE WRA GOVERNANCE HIERARCHY

5.1 Subordinate to Law and Organizational Documents

The Band Plan is a Board-adopted technical instrument. It is subordinate to controlling FCC rules, applicable law, the Corporation's filed Articles of Incorporation, and the Bylaws. It shall be interpreted consistently with later Board policies that validly govern administrative procedure, conflicts, appeals, records, cybersecurity, and appointment authority, provided those policies do not silently alter technical substance.

5.2 Technical Substance vs. Governance Administration

Where the Band Plan states a technical parameter, technical allocation, pair, spacing, or engineering rule, the Band Plan controls unless substantively amended. Where the legacy document refers to WAR officers, committees, websites, internal corporate authority, or organizational procedures, the corresponding WRA governing documents control current administration.

5.3 No Amendment of Bylaws

This Resolution does not amend the Articles of Incorporation or Bylaws and shall not be interpreted to create a new officer, director seat, member voting right, or committee power not otherwise authorized.

5.4 No Override of Appeals or Conflicts Rules

A legacy sentence assigning review or decision authority shall not override WRA's current Appeals and Dispute Resolution Policy, Conflict of Interest Policy, Committee Charters, or Board appointment structure. Technical merits remain governed by the Band Plan; procedural review is governed by current WRA policy.

RESOLUTION 6 - LEGACY NAME AND GOVERNANCE REFERENCES

6.1 Organizational Name

References in the adopted source to "Wisconsin Association of Repeaters," "WAR," or similar legacy branding shall be understood, for current WRA administration, as historical source references and not as a declaration that WRA and the legacy organization are the same legal entity.

6.2 Editorial Replacement in Publication Copy

A later WRA publication copy may replace legacy organization names, outdated website references, page headers, footers, and governance contact references with current WRA equivalents when the replacement does not change technical meaning, legal ownership claims, historical attribution, or substantive rights.

6.3 Historical Attribution

The archival source shall remain unaltered. A modernized publication should preserve reasonable attribution to the historical source and revision lineage so users can understand the document's origin and distinguish historical authorship from WRA's present adoption.

6.4 No Automatic Legal Succession

Use or adoption of the legacy Band Plan does not itself establish merger, statutory succession, assumption of liabilities, or ownership of legacy assets. Any transfer of intellectual property or other legacy rights shall be handled under separate documented authority.

RESOLUTION 7 - FREQUENCY COORDINATOR ADMINISTRATION

7.1 Board Appointment

The Frequency Coordinator shall be appointed under the WRA Bylaws and applicable Board resolutions. Prior service as a legacy coordinator does not automatically confer WRA authority.

7.2 Administration Under Adopted Instruments

Once appointed, the Frequency Coordinator shall administer coordination matters under the Band Plan, WRA's coordination policies and standards, approved selective-access guidance, forms,

modeling practices, and appeals procedures. The Coordinator shall not alter the Band Plan unilaterally.

7.3 Technical Judgment Within Standards

The Band Plan may require competent engineering interpretation when applying technical rules to real-world facts. Reasoned application of an adopted technical rule to a particular coordination is not itself a statewide Band Plan amendment. However, creating a new generally applicable allocation, spacing rule, channel, eligibility criterion, or technical standard is a substantive policy change and requires the change-control process.

7.4 Records

Material Band Plan interpretations that establish a recurring practice or reveal a systemic ambiguity should be documented and referred to the Technical and Band Plan Advisory Committee or Board so that future users are not governed by undocumented private precedent.

RESOLUTION 8 - NO SPECTRUM OWNERSHIP OR FCC LICENSING EFFECT

8.1 Technical Recommendation Function

The Corporation's role is to recommend channels and associated operating and technical parameters to avoid or minimize potential interference, consistent with the federal definition of frequency coordinator. WRA does not issue FCC amateur licenses and does not assign legal ownership of frequencies.

8.2 No Exclusive Frequency Right

Neither adoption of the Band Plan nor issuance of a WRA coordination recommendation creates an exclusive property right in spectrum. Coordination status is a technical and administrative recommendation subject to applicable FCC rules, WRA policy, interference considerations, updates, and lawful technical governance.

8.3 Licensee Responsibility

Each amateur station licensee and control operator remains responsible for compliance with FCC rules. A WRA coordination recommendation does not authorize operation that federal law prohibits and does not excuse harmful, willful, or malicious interference.

8.4 Public Disclaimer

Published copies of the Band Plan should contain a concise statement explaining that WRA is a nonprofit frequency-coordination organization and that the Band Plan and coordination recommendations are technical coordination instruments, not FCC licenses or grants of exclusive spectrum use.

RESOLUTION 9 - EXISTING COORDINATION CONTINUITY AND TRANSITION

9.1 No De-Coordination by Organizational Rebranding

No existing coordination shall be deemed revoked, abandoned, invalid, or technically changed solely because WRA adopts the identified source Band Plan or updates organizational branding. Coordination status shall be determined under the applicable coordination records, technical standards, periodic-update requirements, transition authority, and due-process procedures.

9.2 Pending Matters

Pending applications, interference matters, periodic updates, transfers, and appeals accepted for WRA administration shall be documented at transition. The responsible technical authority shall identify which technical source and version applies and preserve deadlines, submissions, and material history.

9.3 Grandfathering Language Preserved

The source Band Plan includes a general principle addressing the effect of Band Plan changes on existing coordinated operations. Because this Resolution makes no substantive technical change, it does not independently expand, narrow, or reinterpret that principle. Any future substantive change proposal shall expressly analyze its intended application to existing, pending, and future coordinations rather than assume retroactive effect.

9.4 Transition Does Not Validate Unknown Records

Operational continuity does not require WRA to accept an inaccurate, unsupported, duplicate, or disputed legacy coordination record without review. Data migration and technical status confirmation shall follow WRA records and coordination policies while preserving fair notice and appeal rights.

RESOLUTION 10 - SELECTIVE ACCESS AND COMPANION TECHNICAL MATERIALS

10.1 Separate Instrument

The legacy Selective Access Guideline, coordination forms, form instructions, Holder-of-Coordination transfer form, coordination policy, and related technical materials remain separate instruments. Adoption of the Band Plan does not silently amend those documents or incorporate every administrative provision they contain.

10.2 Cross-References

Where the Band Plan depends on selective-access, coordination-form, or related companion material, WRA shall maintain consistent cross-references and identify the authoritative version of each companion instrument. Technical tone/code assignments or other substantive companion technical content shall be preserved unless separately amended through the authorized technical process.

10.3 Inconsistency Handling

If a form, instruction, selective-access document, or policy appears technically inconsistent with the adopted Band Plan, the inconsistency shall be logged and referred for competent review. Staff or volunteers shall not resolve a substantive conflict through an undocumented edit.

10.4 Governance Reconciliation

Companion documents may be updated to reflect WRA's current Board, Frequency Coordinator appointment authority, appeals process, records controls, privacy rules, and organizational name without altering technical meaning.

RESOLUTION 11 - EDITORIAL / ADMINISTRATIVE MODERNIZATION

11.1 Authorized Editorial Work

The Board authorizes preparation of a WRA-branded publication edition that may modernize formatting, typography, page organization, accessibility, navigation, headers, footers, contact information, grammar, nontechnical terminology, cross-references, and governance naming, provided technical meaning remains unchanged.

11.2 Change Log

Every editorial publication shall maintain a revision record describing the categories of editorial changes. The change log shall state expressly that technical content was not substantively changed unless a separate substantive amendment is identified by Board action.

11.3 Technical Review of Editorial Draft

Before an editorially modernized Band Plan is designated authoritative, at least one qualified technical reviewer should compare it to the adopted source using the preservation checklist. Material tables should receive line-by-line or data-level verification appropriate to the risk of transcription error.

11.4 Accessibility and Searchability

WRA may improve bookmarks, table formatting, searchable text, internal navigation, digital accessibility, and file naming. Accessibility work shall preserve frequencies, symbols, table relationships, units, footnotes, bold/normal technical distinctions, and other formatting that carries technical meaning.

11.5 Effective Status of Drafts

A draft modernization is not the authoritative Band Plan until formally released or accepted under Board-authorized publication procedures. Draft files shall be labeled to avoid confusion with the adopted source or later approved edition.

RESOLUTION 12 - SUBSTANTIVE TECHNICAL CHANGE CONTROL

12.1 Definition

A substantive technical change is any proposed revision that could change an engineering outcome, coordination eligibility, frequency availability, spacing, input/output relationship, technical protection criterion, allocation, operating parameter, grandfathering treatment, selective-access assignment, or generally applicable coordination standard. The classification matrix in Appendix C shall guide the determination.

12.2 Proposal Requirement

A substantive proposal shall be written and should identify the affected source provision, proposed text or technical table change, technical objective, factual basis, engineering analysis, expected benefits, potential interference consequences, effect on neighboring jurisdictions, effect on existing and pending coordinations, implementation considerations, and any conflicts of interest.

12.3 Technical Review

The Technical and Band Plan Advisory Committee or other qualified reviewers designated by the Board shall evaluate substantive proposals. Review should consider reliable engineering evidence, regional coordination implications, FCC rules, current spectrum use, compatibility, transition effects, and reasonable alternatives.

12.4 Stakeholder Input

For a material statewide technical change, the Board should provide a reasonable opportunity for affected stakeholders to review or comment unless immediate legal or safety circumstances make prior consultation impracticable. The Board may determine the form and duration of consultation based on complexity and urgency; this Resolution does not invent a fixed comment period.

12.5 Conflict Controls

A person with a material interest in a proposed technical change shall disclose the conflict. Technical expertise may still be used to provide factual input, but conflicted persons shall not dominate or privately control the final review or Board decision.

12.6 Board Approval

No substantive statewide Band Plan change becomes effective merely because a coordinator, committee, administrator, volunteer, or website editor publishes it. The Board must approve the change through recorded corporate action after the required technical process, unless the Bylaws later establish a different higher-authority method.

12.7 Effective Date and Transition Rule

Every substantive amendment shall state its effective date and treatment of existing, pending, and future coordination matters. Silence shall not be used to impose retroactive technical consequences.

RESOLUTION 13 - TECHNICAL ADVISORY REVIEW AND INDEPENDENCE

13.1 Technical and Band Plan Advisory Committee

The Board may activate and use the Technical and Band Plan Advisory Committee established in the Committee Charters to preserve technical integrity, maintain version control, analyze proposed changes, reconcile technical inconsistencies, and support evidence-based recommendations.

13.2 Advisory Status

Unless separately and lawfully constituted with Board powers, the Committee is advisory. Its technical recommendation does not become a corporate amendment until the Board takes the required action.

13.3 Independence

Technical recommendations shall be based on competent information rather than office, seniority, popularity, donor status, club affiliation, vendor interest, or private influence. Where competent reviewers disagree, the competing technical bases and unresolved assumptions should be documented rather than suppressed.

13.4 Neighboring Coordination

Material changes with cross-border implications should include consultation with neighboring frequency coordinators or other relevant regional technical bodies when appropriate to minimize interference and preserve cooperative spectrum planning.

13.5 Appeals Distinguished

An appeal from application of the current Band Plan to an individual coordination matter is handled under the Appeals and Dispute Resolution Policy. An Appeals Panel may correct an erroneous application of the existing rule but may not create a new statewide Band Plan rule as a remedy.

RESOLUTION 14 - PUBLICATION, AUTHORITATIVE COPY, AND VERSION CONTROL

14.1 Authoritative Repository

The Corporation shall maintain an authoritative Band Plan repository under institutional control. At minimum, the repository shall preserve: the adopted source PDF; this Resolution; later Board-approved authoritative editions; revision histories; technical studies supporting substantive amendments; publication dates; and checksums or equivalent integrity identifiers for authoritative digital files where practical.

14.2 Public Edition

The Corporation may publish an accessible public edition on its official website or other communication channels. The public edition shall identify its revision/effective date and should identify the corresponding Board adoption or amendment record.

14.3 Superseded Versions

Superseded authoritative versions shall be archived rather than overwritten. Public users should be able to distinguish the current edition from historical editions. A superseded version shall not be silently presented as current.

14.4 File Integrity

The Secretary, Frequency Coordinator, or designated technical custodian shall maintain reasonable controls against unauthorized editing, accidental replacement, website compromise, or loss. When a public copy differs in hash because of accessible formatting, the revision register shall link it to the underlying Board-approved content.

14.5 Correction of Publication Error

If a publication copy contains a transcription or formatting error that does not reflect the Board-approved technical content, the Corporation may promptly correct the publication to conform to the approved source. The correction shall be logged when material. A correction that changes technical meaning must instead follow Resolution 12.

RESOLUTION 15 - INTELLECTUAL PROPERTY, ATTRIBUTION, AND PROVENANCE

15.1 No Ownership Representation by Adoption

This Resolution does not declare that WRA owns copyright, trademark rights, database rights, authorship rights, or other intellectual property in the legacy source merely because the Board adopts it as a technical instrument.

15.2 Lawful Use Basis

Before public rebranding or distribution beyond any clearly established rights, the Board or responsible custodian should preserve the Corporation's lawful basis for use, such as assignment, permission, license, ownership, public-domain status, fair-use basis where appropriate, or another legally sufficient right.

15.3 Attribution and Historical Integrity

Where consistent with WRA's rights and publication needs, WRA should preserve reasonable historical attribution, the source revision lineage, and the distinction between legacy authorship and WRA's current governance adoption.

15.4 New WRA Contributions

Ownership and licensing of future WRA-created technical analyses, graphics, software, tables, publications, and derivative materials shall be documented under WRA's Asset Management Policy, Volunteer and Advisor Policy, contracts, assignments, or licenses as applicable.

RESOLUTION 16 - RECORDS, ARCHIVES, CYBERSECURITY, AND CONTINUITY

16.1 Permanent Retention

The adopted source, this Resolution, authoritative Band Plan editions, substantive amendment resolutions, technical change records, and revision histories shall be treated as records of enduring or permanent technical/governance value under the Document Retention and Destruction Policy.

16.2 Technical Data Integrity

Band Plan source files and publication materials shall be protected under the Data Privacy and Cybersecurity Policy. Critical files should have controlled access, backups, version history, and recovery capability so a single person cannot alter or withhold the authoritative document.

16.3 Legal Holds

No Band Plan source, technical study, revision record, or related communication subject to a legal hold, technical dispute, appeal, investigation, or reasonably anticipated litigation may be destroyed or altered contrary to preservation requirements.

16.4 Succession

The Band Plan repository, publication credentials, website administration, technical source files, revision records, and amendment history shall be included in technical succession planning for the Frequency Coordinator and other custodians.

16.5 Public Availability and Security

Public Band Plan information should remain reasonably available to affected stakeholders. Cybersecurity controls shall protect the integrity of the publication process without turning public technical rules into undisclosed rules or blocking lawful records access.

RESOLUTION 17 - CONFLICT WITH LAW, EMERGENCY PROTECTION, AND CORRECTIONS

17.1 Controlling Law

Nothing in the Band Plan authorizes operation contrary to FCC rules or other controlling law. If a current technical provision is credibly alleged to conflict with controlling law, the Board shall obtain competent legal and technical review as appropriate.

17.2 Temporary Administrative Protection

When continued reliance on a disputed provision could create material legal, safety, or interference risk, the Board or authorized technical leadership may temporarily pause new action under the affected provision pending prompt review. A pause is not a permanent substantive amendment and shall be documented with scope and reason.

17.3 No Unilateral Rewrite Under Emergency Label

Emergency protection does not authorize an administrator to publish a new permanent allocation, pair, spacing, or technical rule without Board action. Any permanent change follows Resolution 12 unless controlling law directly determines the required result and the Board records the conforming action.

17.4 Clerical Corrections

Purely clerical corrections that restore the Board-approved source without changing meaning may be implemented and logged. Uncertainty shall be resolved in favor of treating the change as substantive until competent review establishes otherwise.

RESOLUTION 18 - IMPLEMENTATION AUTHORITY, EFFECTIVE DATE, AND CERTIFICATION

18.1 Implementation

The Chair/President, Secretary or records custodian, Frequency Coordinator once appointed, Technical and Band Plan Advisory Committee when activated, and other authorized officers or volunteers may take administrative actions reasonably necessary to implement this Resolution, including preserving the source file, establishing version control, preparing an editorial publication copy, maintaining the revision register, and publishing accurate notices.

18.2 Limits on Implementation

Implementation authority does not include substantive technical amendment, intellectual-property transfer, assumption of legacy liabilities, execution of a material contract, or other action requiring separate Board or legal authority.

18.3 Effective Date

This Resolution becomes effective on the Effective Date recorded by the Board. If no separate Effective Date is stated, it becomes effective upon adoption.

18.4 Supersession of Interim Status

Upon effectiveness, this Resolution supersedes the merely interim treatment of the source Band Plan to the extent the Initial Organizational Board Resolutions contemplated a later formal adoption instrument. It does not repeal other valid technical or governance policies except where a direct inconsistency is expressly resolved by this Resolution.

18.5 Certification

The Secretary or authorized recording officer shall retain the signed or approved Board record together with the source-artifact identification certificate and authoritative source file.

APPENDIX A - ADOPTED SOURCE ARTIFACT IDENTIFICATION CERTIFICATE

This certificate identifies the exact historical technical source adopted by reference. It is not a restatement of the source's technical content.

Source File Name	WAR-Bandplan-Revised-2019.pdf
Internal Document Heading	Wisconsin Band Plan - Revised 12/2018

APPENDIX B - TECHNICAL CONTENT PRESERVATION CHECKLIST

Use this checklist before a WRA-branded or reformatted Band Plan publication is designated authoritative. A “No Change” entry means the technical content matches the adopted source. Any technical difference must identify a separately approved substantive amendment.

Technical Element	No Change Confirmed	Approved Amendment Reference / Notes
Band and sub-band boundaries / listed channel ranges	[]	
Repeater input frequencies	[]	
Repeater output frequencies	[]	
Input/output pair relationships and splits	[]	
Channel spacing / step sizes	[]	
Simplex / calling / packet / digital / weak-signal designations	[]	
Auxiliary-link or link frequency designations	[]	
Satellite-related allocations or notes	[]	
Coordinated vs. non-coordinated technical distinctions	[]	
Spectral-purity / occupied-bandwidth provisions	[]	
Interference-related technical provisions in the Band Plan	[]	
Grandfathering / effect-of-change language	[]	
Technical footnotes, asterisks, symbols, and exceptions	[]	
Units, decimal precision, signs, symbols, and mathematical relationships	[]	

Technical Element	No Change Confirmed	Approved Amendment Reference / Notes
Bold/normal or other formatting that carries technical meaning	[]	
Tables, row/column alignment, and association of values	[]	

Technical Reviewer	
Second Reviewer, if used	
Publication Version	
Review Date	

APPENDIX C - EDITORIAL VS. SUBSTANTIVE CHANGE CLASSIFICATION MATRIX

Proposed Change	Default Classification	Control
Organization name / logo / page header / footer	Editorial	Allowed if technical meaning and historical attribution are preserved.
Website, email, or contact information	Editorial	Update to current WRA contact; preserve technical content.
Grammar, punctuation, typography, accessibility, bookmarks	Editorial	Allowed only if meaning, units, symbols, and table relationships are unchanged.
Reordering sections without changing relationships	Editorial / review required	Qualified review needed to ensure cross-references and technical context remain intact.
Replacing outdated governance title with current WRA role	Administrative / editorial	Allowed when decision authority follows current Bylaws/policies and technical rule is unchanged.

Proposed Change	Default Classification	Control
Changing a frequency, pair, input, output, split, or spacing	Substantive	Technical proposal, review, stakeholder input as appropriate, Board approval.
Adding/removing a coordinated channel or band segment	Substantive	Technical proposal and Board approval.
Changing coordinated vs. non-coordinated designation	Substantive	Technical proposal and Board approval.
Changing mode, emission, ERP, antenna, protection, or engineering criterion	Substantive	Technical proposal and Board approval.
Changing grandfathering or transition treatment	Substantive	Technical/legal analysis and Board approval.
Changing a selective-access assignment	Substantive companion-document change	Process under the applicable technical instrument and Board authority.
Correcting a suspected frequency/table typo	Presumptively substantive until verified	Document discrepancy; qualified review; do not silently change.
Correcting an obvious publication transcription error to match Board-approved source	Clerical	Log correction; no technical amendment because approved substance does not change.
Temporary pause to address credible legal/safety conflict	Interim protective action	Document reason; prompt Board/legal/technical review; not a permanent amendment.

APPENDIX D - FUTURE SUBSTANTIVE BAND PLAN CHANGE PROPOSAL FORM

Proposal ID	_____
Proponent / Organization	_____
Date Submitted	_____
Affected Band / Section	_____
Affected Source Provision / Table	_____

Conflict Disclosure Submitted	Yes / No / Not Applicable
--------------------------------------	---------------------------

1. Existing technical provision:

2. Proposed technical change:

3. Technical objective and engineering basis:

4. Interference, adjacent-channel, propagation, or regional-coordination analysis:

5. Effect on existing, pending, and future coordinations:

6. Alternatives considered and reasons for recommendation:

7. Stakeholder / neighboring-coordinator input, if applicable:

Technical Recommendation	Committee	Approve / Modify / Reject / More Study
Committee Review Date		
Board Action		
Effective Date, if approved		
Transition / Grandfathering Rule		
Amendment Version		

APPENDIX E - PUBLICATION AND VERSION-CONTROL REGISTER

Version / File	Status	Technical Basis	Board Approval Reference	Effective Publication Date	Integrity Notes
WAR-Bandplan-Revised-2019.pdf	Adopted archival source	Legacy technical source; no WRA technical changes	This Resolution		SHA-256 in Appendix A
	Draft editorial modernization	Must match adopted source except separately approved changes			
	Authoritative WRA publication	Source + approved amendments only			
	Superseded historical version	Preserve for archive			

Version / File	Status	Technical Basis	Board Approval Reference	Effective Publication Date	Integrity Notes
_____	Substantive amendment	Technical proposal and Board action	_____	_____	_____

Version-control rule: An authoritative file shall not be replaced in place without preserving the prior authoritative version and recording the new version or correction. Public web publication should clearly identify the current effective version.

APPENDIX F - IMPLEMENTATION CHECKLIST

- Retain the adopted source PDF together with this Resolution in the official Corporation repository.
- Verify the SHA-256 digest and page count of the archival source.
- Record adoption and effective dates in Board minutes and the policy/technical instrument register.
- Identify the authorized technical custodian and backup custodian.
- Establish a controlled public/working copy separate from the archival source.
- Label the source and any modernized draft clearly so users can identify status.
- Review intellectual-property / publication authority before public rebranding or broad distribution if not already established.
- When preparing WRA branding, apply the Technical Content Preservation Checklist before release.
- Update legacy governance/contact references only where the change is administrative/editorial and does not alter technical meaning.
- Maintain the Band Plan, Selective Access Guideline, coordination policy, forms, and instructions as separately version-controlled instruments.
- Ensure the Frequency Coordinator and technical volunteers know they cannot unilaterally amend statewide Band Plan substance.
- Activate the Technical and Band Plan Advisory Committee when Board needs justify it and record its advisory status.
- Maintain a documented intake path for future substantive technical proposals.
- Preserve historical and superseded editions under the records policy.
- Include Band Plan repository and publication access in cybersecurity and succession reviews.

APPENDIX G - LEGAL AND TECHNICAL REFERENCE NOTE

This Resolution is a corporate technical-governance instrument. It adopts a technical source and establishes internal change-control and records procedures; it is not an FCC license, spectrum

assignment, engineering opinion on a particular proposed station, or representation that WRA owns the intellectual property in the historical source.

Authority / Source	Relevance
Wis. Stat. § 181.0801 (2025)	Provides that a Wisconsin nonstock corporation has a Board and, except as otherwise provided, corporate powers are exercised by or under Board authority and affairs are managed under Board direction.
47 C.F.R. § 97.3(a)(22)	Defines “frequency coordinator” as a locally or regionally recognized entity that recommends transmit/receive channels and associated operating and technical parameters for eligible auxiliary or repeater stations to avoid or minimize potential interference.
47 C.F.R. § 97.101	Requires good engineering and good amateur practice; cooperative selection and effective use of amateur frequencies; states that no frequency is assigned for exclusive use of any station; and prohibits willful or malicious interference.
WAR-Bandplan-Revised-2019.pdf; internal title “Wisconsin Band Plan - Revised 12/2018”	The twenty-page technical source adopted by reference. Its technical text and tables control over summaries in this Resolution.
WRA Initial Organizational Board Resolutions - Resolution 11	Previously authorized interim use of the legacy Band Plan and expressly preserved frequency allocations, repeater pairs, channel spacing, splits, technical tables, and other technical parameters during modernization.
WRA Committee Charters - Charter 2	Establishes a Technical and Band Plan Advisory Committee framework, requires preservation of current technical substance, and separates editorial from substantive changes.
WRA Appeals and Dispute Resolution Policy	Separates individual technical appeals from statewide Band Plan amendments; an Appeals Panel may review application of the current standard but does not create a statewide technical change.

Authority / Source	Relevance
WRA Document Retention and Destruction Policy; Data Privacy and Cybersecurity Policy	Require controlled institutional custody, version history, backup, integrity, legal holds, and continuity for important technical records and systems.
WRA Legacy Organization Dissolution and Asset Transfer Framework; Asset Management Policy	Require lawful ownership/transfer basis and prevent technical use or possession from being treated as automatic legal succession or ownership.

Implementation note: If the filed Articles of Incorporation, a later Bylaw amendment, controlling FCC rule, or another binding legal authority materially affects this Resolution, the Board should obtain appropriate legal and technical review and conform the governance instrument without silently rewriting technical source data.

BOARD ADOPTION AND CERTIFICATION

The Board of Directors of Wisconsin Repeater Alliance, Inc., having reviewed the purpose and limitations of this Resolution, hereby adopts the identified Wisconsin Band Plan by reference as the Corporation's controlled technical Band Plan, subject to the technical-preservation, governance, legal, intellectual-property, records, and change-control provisions stated above. By signing below, the Secretary or other authorized recording officer certifies that the foregoing accurately records the Board action reflected in the Corporation's minutes or written action and that the source artifact identified in Appendix A is maintained with the Corporation's official technical records.
